## SAFETY

**WARNING:** This symbol means **WARNING ! BE VIGILANT ! YOUR SAFETY IS AT RISK**. The message that follows the symbol contains important safety information. Read it carefully. Be sure you understand the possible risks of injury or even death.

To avoid all risks, always follow the safety notes contained in this section and throughout this manual.

Put the warning tag shown below on the key for the keyswitch when servicing or repairing the machine. One warning tag is supplied with each machine. Additional tags, Part Number 321-4614, are available from your service parts supplier.

PDG0328

**WARNING:** Read the Operator's Manual carefully and make sure you understand how to operate the controls correctly.

**WARNING:** Never operate the machine and attachment controls unless you are seated in the operator's seat. If you are not in the operator's seat, you run the risk of serious injury.

**WARNING:** The machine is built to carry the operator only. Do not allow passengers to ride on the machine.

**WARNING :** Prior to starting up the engine read the safety messages contained in the operator's manual carefully. Read all safety stickers on the machine. Have people move back from the machine. Learn how to use the controls before starting up the machine. It is your responsibility to follow the manufacturer's instructions on how to operate and maintain the machine. It is your responsibility to follow applicable rules and regulations. Service and Operator's Manuals are available from your J.I. Case Dealer.

**WARNING:** If you wear loose clothing or if you omit to use safety equipment for your work, you risk injury. Always wear clothes that do not risk getting caught in the machine. Other safety equipment may be necessary, in particular : helmets, safety shoes, ear plugs, safety glasses, protection mask, thick gloves and reflecting clothes.

**WARNING:** When working close to the fan with the engine running, avoid wearing loose clothing and operate with extreme caution.

**WARNING:** When checking the hydraulic circuits, follow procedures to the letter. **DO NOT CHANGE** procedures.

**WARNING:** Prior to operating the hydraulic cylinders of this machine for setting or to bleed the circuit, have all people standing around the machine move away.

**WARNING:** Wear gloves or insulated mittens when working on hot parts.

**WARNING:** Lower all attachments to the ground or rest them on stands before carrying out maintenance jobs.

**WARNING:** Fine sprays of hydraulic oil under pressure can penetrate the skin and cause serious infection. If hydraulic oil under pressure penetrates the skin, see a doctor immediately. Maintain all hoses and pipes in good condition. Make sure that all connections are properly tightened. Change all hoses or pipes that have been damaged or that are suspect. **DO NOT CHECK** for leaks with bare hands. Use a piece of cardboard or wood.

**WARNING:** To remove a hardened pin such as a pivot pin, or a hardened shaft, use a soft head hammer (brass or bronze) or a brass or bronze strip and a steel head hammer.

**WARNING:** When using a hammer to remove or reassemble pivot pins, or when using compressed air, or when using a grinder make sure to wear safety glasses that protect the eyes from all sides.

**WARNING:** Use proper lifting/hoisting equipment to lift wheels or tracks and always work on safe ground. Prevent the machine from moving using correct safety chocks.

**WARNING:** When performing maintenance or repair operations on the machine, make sure that the work shop floor, the cab and the steps of the excavator are free from oil, water, grease, tools etc. Use oil absorbing material or rags as necessary. Always think safety.

**WARNING:** Certain components of this machine are very heavy. Use hoisting tools or additional assistance as recommended in this manual.

**WARNING:** Exhaust fumes can cause death. If it is necessary to start up the engine in a closed building, evacuate exhaust fumes using an exhaust pipe extension. Open the doors and let fresh air into the building.

**WARNING:** When battery liquid is frozen, the battery can explode if : (1) you try to charge the battery or (2) you try to start the engine by connecting an auxiliary power source. To prevent battery electrolyte from freezing keep the battery fully charged. If you do not follow these instructions, you or others nearby may be injured.

**WARNING:** Batteries contain acid and explosive gases. A spark, a flame or an improper cable connection may cause an explosion. For proper connection of cables to the battery of this machine see the Operator's Manual. If you do not follow these instructions, you risk severe injury.

## TWIN WHEELS

### Safety rules

**WARNING:** *In all cases, before removing twin wheels, always deflate both tyres completely.*

**WARNING:** *If a tyre bursts it can cause serious injury. Check tyres regularly to see that they are in good condition and always be sure to inflate them to the correct pressure.*

**WARNING:** *Never face a tyre when checking pressure or adding air. Always stand in front of the tread. Use an inflation cage if the wheel has been removed from the machine. Make sure all people standing in the area move well away.*

**WARNING:** *Never weld near a tyre. If this can not be avoided, it is mandatory to remove the tyre before performing any welding operations.*

**WARNING:** *Make sure that all decals on the machine are perfectly legible, clean them regularly and replace any decals which are damaged, missing or painted over, with new ones.*

### Safety instructions

- Use appropriate, good quality tools to disassemble the various wheel components. Never use a hammer. Use a rubber, plastic or copper-faced mallet.

**IMPORTANT:** *Never remove the inner tyre valve extension, as this will be necessary afterwards for inflating and deflating the tyre.*

**IMPORTANT:** *If the valve or the valve extension are no longer accessible, take the necessary precautions and then, imperatively, puncture the tyre.*

- Use suitable grease to facilitate the installation and removal of the tyre.
- Never re-inflate a tyre on the machine which has been used at a pressure lower than 5.6 bar.
- Check the various components: tyre, rim, shoulder, retaining ring and replace any defective items.
- Never reuse a retaining ring which is distorted or rusty.

## GENERAL INFORMATION

### CLEANING

Clean all metal parts except bearings with white spirit or steam. Do not use caustic soda when steam cleaning. After cleaning, dry and lubricate all parts. Clean hydraulic lines with compressed air. Clean bearings with kerosene, then dry them and lubricate them.

### INSPECTION

Check all parts when disassembled. Change all parts showing wear or damage. Scratches that are not too deep can be removed by honing or with a rag dipped into buffing compound. A full visual inspection to detect wear and pitting and subsequent changing of parts will prevent premature failure.

### BEARINGS

Check that bearings rotate freely. If their adjustment is too loose or if they do not run regularly, change them. Wash bearings with a good solvent or kerosene and let them dry. **DO NOT DRY BEARINGS WITH COMPRESSED AIR.**

### NEEDLE BEARINGS

Before inserting needle bearings into a bore, remove all metal particles from the edge of the bore. Prior to mounting bearings with a press, coat the inside and the outside of the bearing with vaseline.

### GEARS

Check all the gears for wear or damage. Change worn or damaged gears.

### SEAL RINGS, O-RINGS, GASKETS

Always use new seal rings. O-rings and gaskets. Coat sealing rings and O-rings with vaseline.

### SHAFTS

Check all shafts showing signs of wear or damage. Check that the surface of a shaft running in a bearing is not damaged.

### SPARE PARTS

Always use original CASE spare parts. To order spare parts, see the Spare Parts Catalogue to indicate the proper reference of original CASE spare parts. Failures caused by the use of parts that are not original CASE spare parts are not covered by the warranty.

### LUBRICATION

Use only oils and lubricants specified in the Operator's and Service Manuals. Failures due to the use of oils and lubricants not specified are not covered by the warranty.

## CORRECT USE OF TORQUE WRENCHES

<p><b>TORQUE WRENCHES</b></p>	 <p style="text-align: right; font-size: small;">PDG0315</p>
<p><b>CORRECT USE</b></p> <p>a - Hold the wrench by the handle provided.</p> <p>b - When tightening, always keep the wrench perpendicular to the screw.</p> <p>c - Keep one hand on the leverage point handle on the wrench.</p> <p>d - Tighten progressively in one movement.</p> <p>e - Position a correctly dimensioned socket or open-ended wrench on the flats of the screw head.</p>	<div style="text-align: center; font-weight: bold; font-size: 24px; margin-bottom: 20px;">NO</div>   <div style="text-align: center; font-weight: bold; font-size: 24px; margin-bottom: 20px;">HAND</div>   <div style="text-align: center; font-weight: bold; font-size: 24px; margin-bottom: 20px;">NO</div>   <div style="text-align: center; font-weight: bold; font-size: 24px; margin-bottom: 20px;">NO</div>   <div style="text-align: center; font-weight: bold; font-size: 24px; margin-bottom: 20px;">NO</div> <p style="text-align: right; font-size: small;">PDG0316</p>

## HARDWARE TIGHTENING ORDER

<p><b>TORQUE WRENCHES</b></p>	 <p style="text-align: right; font-size: small;">PDG0317</p>
<p><b>INITIAL TORQUE</b></p> <p style="margin-top: 20px;">a - Torque wrench.</p> <p style="margin-top: 10px;">- Follow the correct order of procedure when tightening.</p> <p style="margin-top: 10px;">- Cross or diagonal pattern tightening.</p>	<div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 10px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <p style="text-align: right; font-size: small;">PDG0318</p>
<p><b>FINAL TORQUE</b></p> <p style="margin-top: 20px;">Always tighten in clockwise order.</p>	<div style="display: flex; justify-content: space-around; align-items: flex-start;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <div style="display: flex; justify-content: space-around; align-items: flex-start; margin-top: 10px;"> <div style="text-align: center;">  </div> <div style="text-align: center;">  </div> </div> <p style="text-align: right; font-size: small;">PDG0319</p>

**WARNING:** *This symbol is used in this manual to indicate important safety messages. Whenever you see this symbol, carefully read the message that follows, as there is a risk of serious injury.*

## FLUIDS AND LUBRICANTS

Lubricants must have the correct properties for each application.

**WARNING:** *The conditions of use for individual fluids and lubricants must be respected.*

### Hydraulic fluid

CASE hydraulic fluid is specially designed for high pressure applications and for the CASE hydraulic system. The type of fluid to be used depends on the ambient temperature.

#### Temperate climates

-20°C to +40°C  
Fluid type ISO VG 46  
CASE reference: POHYDR

#### Hot climates

0°C to +60°C  
Fluid type ISO VG 100  
CASE reference: POHYDC

#### Cold climates

-40°C to +20°C  
Fluid type ISO VG 22  
CASE reference: POHYPF

These various grades of fluid must be in conformity with CASE France specification P9903201Z.

#### Temperate climate biodegradable fluid:

This yellow fluid is compatible with standard fluid. If adopted, it is advisable to drain the circuit completely.

Fluid type ISO VG 46  
CASE reference: CASYNTH46

This grade of fluid must be in conformity with CASE France specification P9903203B

### Transmission component oil

Extreme pressure oil used for transmission components inside sealed housings.

Extreme pressure oil TYPE API GL5 GRADE 80W90 or ISO VG 150

### Grease

The type of grease to use depends on ambient temperature.

#### Temperate and hot climates

-20°C to +60°C  
Extreme pressure grease EP NLGI grade 2 with molybdenum disulphide.

#### Cold climates

-40°C to +20°C  
Extreme pressure grease EP NLGI grade 0.

## Engine oil

CASE engine oil N°1 is recommended for your engine. This oil ensures correct lubrication of your engine in all working conditions.

If CASE N°1 Multiperformance or Performance engine oil is not available, use oil corresponding to category API/CG/CF.

**NOTE:** Do not put any Performance Additive or other additive in the sump. Oil change intervals shown in this manual are based on tests carried out on CASE lubricants.
